1. Scope
This reference specification applies to LQH32PH_NC Series, Chip coil (Chip Inductors) automotive Electronics based on AEC-Q200.

2. Part Numbering
(ex) LQH32PH□□□□□□□□ LQH32PH1R0NNCL
Product ID: Structure: Dimension: Applications and Characteristics
P: 32: H: N: 1R0: Other: C: L: Packaging
Characteristics

3. Rating
- Operating Temperature Range.
  (Ambient temperature; Self-temperature rise is not included) -40 to +105°C
  (Product temperature; Self- temperature rise is included) -40 to +125°C
- Storage Temperature Range. -40 to +125°C

4. Testing Conditions
{Unless otherwise specified} {In case of doubt}
Temperature: Ordinary Temperature (15 to 35°C) Temperature: 20 ± 2°C
Humidity: Ordinary Humidity (25 to 85% (RH)) Humidity: 60 to 70% (RH)
Atmospheric Pressure: 86 to 106 kPa
5. Appearance and Dimensions

### 8. Specification of Packaging

#### 8.1 Appearance and Dimensions of plastic tape

![Diagram of plastic tape and terminal with dimensions](image)

*The packing directions of the chip coil in taping are unified with the in/out positions of the lead wire.*

Dimension of the Cavity is measured at the bottom side.

(in mm)
8.2 Specification of Taping
(1) Packing quantity (standard quantity)
  2,000 pcs / reel
(2) Packing Method
  Products shall be packed in the each embossed cavity of plastic tape and sealed by cover tape.
(3) Sprocket hole
  The sprocket holes are to the right as the tape is pulled toward the user.
(4) Spliced point
  Plastic tape and Cover tape has no spliced point.
(5) Missing components number
  Missing components number within 0.1 % of the number per reel or 1 pc., whichever is greater, and are not continuous. The specified quantity per reel is kept.

8.3 Pull Strength

<table>
<thead>
<tr>
<th>Material</th>
<th>Minimum Value</th>

<td>(minimum value is typical)</td>
</tr>
</tbody>
</table>

8.5 Dimensions of Leader-tape, Trailer and Reel

There shall be leader-tape (cover tape) and trailer-tape (empty tape) as follows.

8.6 Marking for reel

Customer part number, MURATA part number, Inspection number(+1), RoHS marking(+2), Quantity etc ...

+1) <Expression of Inspection No.>
  □□ OOOO XXX
  (1) (2) (3)
  (1) Factory Code
  (2) Date First digit : Year / Last digit of year
       Second digit : Month / Jan. to Sep. → 1 to 9, Oct. to Dec. → O, N, D
       Third, Fourth digit : Day

+2) « Expression of RoHS marking »
  ROHS – Y (△)
  (1) (2)
  (1) RoHS regulation conformity
  (2) MURATA classification number

8.7 Marking for Outside package (corrugated paper box)

Customer name, Purchasing order number, Customer part number, MURATA part number, RoHS marking (+2), Quantity, etc ...

MURATA MFG.CO., LTD
8.8. Specification of Outer Case

<table>
<thead>
<tr>
<th>Outer Case Dimensions (mm)</th>
<th>Standard Reel Quantity in Outer Case (Reel)</th>
</tr>
</thead>
<tbody>
<tr>
<td>W</td>

</tr>
</tbody>
</table>

*Above Outer Case size is typical. It depends on a quantity of an order.

9. **Caution**

9.1 Limitation of Applications

Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property.

1. Aircraft equipment
2. Aerospace equipment
3. Undersea equipment
4. Power plant control equipment
5. Medical equipment
6. Transportation equipment (trains, ships, etc.)
7. Traffic signal equipment
8. Disaster prevention / crime prevention equipment
9. Data-processing equipment
10. Applications of similar complexity and/or reliability requirements to the applications listed in the above

9.2 Caution (Rating)

Do not exceed maximum rated current of the product. Thermal stress may be transmitted to the product and short/open circuit of the product or falling off the product may be occurred.

9.3 Fail-safe

Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

10. **Notice**

This product is designed for solder mounting. (Reflow soldering only)

Please consult us in advance for applying other mounting method such as conductive adhesive.

10.1 Land pattern designing (Reflow Soldering)

Recommended land pattern for reflow soldering is as follows:

It has been designed for Electric characteristics and solderability.

Please follow the recommended patterns. Otherwise, their performance which includes electrical performance or solderability may be affected, or result to "position shift" in soldering process.

10.2 Flux, Solder

<table>
<thead>
<tr>
<th>Flux</th>
<th>Solder</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Use rosin-based flux.</td>
<td>• Use Sn-3.0Ag-0.5Cu solder</td>
</tr>
<tr>
<td>• Don’t use highly acidic flux with halide content exceeding 0.2(wt)% (chlorine conversion value).</td>
<td>• Standard thickness of solder paste: 100μm to 150μm</td>
</tr>
<tr>
<td>• Don’t use water-soluble flux.</td>
<td></td>
</tr>
</tbody>
</table>

Other flux (except above) Please contact us for details, then use.
10.3 soldering conditions (Reflow)
- Pre-heating should be in such a way that the temperature difference between solder and product surface is limited to 100°C max. Cooling into solvent after soldering also should be in such a way that the temperature difference is limited to 100°C max.
- Insufficient pre-heating may cause cracks on the product, resulting in the deterioration of product quality.
- Standard soldering profile and the limit soldering profile is as follows. The excessive limit soldering conditions may cause leaching of the electrode and / or resulting in the deterioration of product quality.

<table>
<thead>
<tr>
<th></th>
<th>Standard Profile</th>
<th>Limit Profile</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pre-heating</td>
<td>150~180°C</td>
<td>90s±30s</td>
</tr>
<tr>
<td>Heating</td>
<td>above 220°C, 30s~60s</td>
<td>above 230°C, 60s max.</td>
</tr>
<tr>
<td>Peak temperature</td>
<td>245±3°C</td>
<td>260°C, 10s</td>
</tr>
<tr>
<td>Cycle of reflow</td>
<td>2 times</td>
<td>2 times</td>
</tr>
</tbody>
</table>

10.4 Reworking with soldering iron.
The following conditions must be strictly followed when using a soldering iron.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Pre-heating</td>
<td>150°C, 1 min</td>
</tr>
<tr>
<td>Tip temperature</td>
<td>350°C max.</td>
</tr>
<tr>
<td>Soldering iron output</td>
<td>80W max.</td>
</tr>
<tr>
<td>Tip diameter</td>
<td>φ3mm max.</td>
</tr>
<tr>
<td>Soldering time</td>
<td>3 (+1,-0)s</td>
</tr>
<tr>
<td>Times</td>
<td>2 times</td>
</tr>
</tbody>
</table>

Note: Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the products due to the thermal shock.

10.5 Solder Volume
- Solder shall be used not to exceed the upper limits as shown below.
- Accordingly increasing the solder volume, the mechanical stress to Chip is also increased. Exceeding solder volume may cause the failure of mechanical or electrical performance.

\[ \frac{1}{3} T \leq t \leq T \]
(T: Lower flange thickness)

10.6 Product's location
The following shall be considered when designing and laying out P.C.B.'s.
(1) P.C.B. shall be designed so that products are not subject to the mechanical stress due to warping the board.

[Products direction] Products shall be located in the sideways direction (Length: a < b) to the mechanical stress.
Components location on P.C.B. separation.

It is effective to implement the following measures to reduce stress in separating the board. It is best to implement all of the following three measures; however, implement as many measures as possible to reduce stress.

<table>
<thead>
<tr>
<th>Contents of Measures</th>
<th>Stress Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Turn the mounting direction of the component parallel to the board separation surface.</td>
<td>A &gt; D +1</td>
</tr>
<tr>
<td>(2) Add slits in the board separation part.</td>
<td>A &gt; B</td>
</tr>
<tr>
<td>(3) Keep the mounting position of the component away from the board separation surface.</td>
<td>A &gt; C</td>
</tr>
</tbody>
</table>

- A > D is valid when stress is added vertically to the perforation as with Hand Separation. If a Cutting Disc is used, stress will be diagonal to the PCB, therefore A > D is invalid.

Mounting Components Near Screw Holes

When a component is mounted near a screw hole, it may be affected by the board deflection that occurs during the tightening of the screw. Mount the component in a position as far away from the screw holes as possible.

10.7 Cleaning Conditions

Products shall be cleaned on the following conditions.

1. Cleaning temperature shall be limited to 60°C max. (40°C max for IPA.)
2. Ultrasonic cleaning shall comply with the following conditions with avoiding the resonance phenomenon at the mounted products and P.C.B.
   - Power: 20 W / l max.
   - Frequency: 28kHz to 40kHz
   - Time: 5 minutes max.
3. Cleaner
   - Alcohol-based cleaner: IPA
   - Aqueous agent: PINE ALPHA ST-100S
4. There shall be no residual flux and residual cleaner after cleaning.
   - In the case of using aqueous agent, products shall be dried completely after rinse with de-ionized water in order to remove the cleaner.
5. Other cleaning
   - Please contact us.

10.8 Resin coating

The inductance value may change due to high cure-stress of resin to be used for coating/molding products. An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resin contains some impurities or chloride possible to generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of coil, leading to open circuit. So, please pay your careful attention when you select resin in case of coating/molding the products with the resin. Prior to use the coating resin, please make sure no reliability issue is observed by evaluating products mounted on your board.

10.9 Caution for use

- Sharp material such as a pair of tweezers or other material such as bristles of cleaning brush, shall not be touched to the winding portion to prevent the breaking of wire.
- Mechanical shock should not be applied to the products mounted on the board to prevent the breaking of the core.

10.10 Handling of a substrate

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate. Excessive mechanical stress may cause cracking in the product.
10.11 Storage and Handling Requirements

(1) Storage period
Use the products within 12 months after delivered.
Solderability should be checked if this period is exceeded.

(2) Storage conditions
- Products should be stored in the warehouse on the following conditions.
  Temperature : -10 ~ 40°C
  Humidity     : 15 to 85% relative humidity   No rapid change on temperature and humidity
  The electrode of the products is coated with solder. Don't keep products in corrosive gases such as sulfur,
  chlorine gas or acid, or it may cause oxidization of electrode, resulting in poor solderability.
- Products should not be stored on bulk packaging condition to prevent the chipping of the core and
  the breaking of winding wire caused by the collision between the products.
- Products should be stored on the palette for the prevention of the influence from humidity, dust and so on.
- Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.

(3) Handling Condition
Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.

11. Note
(1) Please make sure that your product has been evaluated in view of your specifications with our product being
    mounted to your product.
(2) You are requested not to use our product deviating from the reference specifications.
(3) The contents of this reference specification are subject to change without advance notice.
    Please approve our product specifications or transact the approval sheet for product specifications before ordering.
